# ßlocktu.be

decentralised, censorship
free video community

crowdsale of our custom ß token

We will be partnering with Storj to bring peristent storage
to content creators who are willing to pay a small fee to the miners.

you@somedomain.com

free of censorship

distributed and blazingly fast

BlockTu.be stores its content on IPFS, the interplane-
tary file system. This means the content is distributed
over a decentralised p2p network. So the more
popular a video gets, the faster it streams.

Our backend is built on smart contracts living on the
Ethereum blockchain.

Our foundation is a democratic autonomous organi-
sation living on Ethereum.

earn ß tokens, spend likes and views

BlockTu.be has its own economics built-in.
So when you upload a video that viewers like, they
will reward you with tokens.

Content creation will be valued honestly, and content
creators will have a way to earn tokens.

Viewers can trade tokens for a number of different
crypto-tokens such as Ether and Bitcoin.

Viewers award each other the same tokens by com-
menting and engaging in the community.

built-in decentralised advertising platform

If you really want to invest in promoting an idea, a
service or a product, you can bid on ad spots.

You decide how many tokens you're willing to spend.

If a user adds your video as a preroll, or includes your
video in a playlist, the user as well as the viewers will
receive those tokens.
